

Machine Learning

What is ML?

Machine Learning is a subset of Artificial Intelligence that focuses on the development of algorithms that can learn from data and make predictions or decisions without being explicitly programmed to do so.

Machine Learning is a branch of computer science that studies the design of algorithms that can learn from data and make predictions or decisions without being explicitly programmed to do so.

Machine Learning is a branch of computer science that studies the design of algorithms that can learn from data and make predictions or decisions without being explicitly programmed to do so.

Machine Learning is a branch of computer science that studies the design of algorithms that can learn from data and make predictions or decisions without being explicitly programmed to do so.
